

Book I. Prop. XII. Prob. *To draw a straight line perpendicular to a given indefinite straight line (— —) from a given point (↑) without.* With the

given point ↑ as centre, at one side of the line, and any distance — — capable of extending to the other side, describe ⤿.

Make — — = — — (pr. I.10), draw — —, — — and — —, then — — $\perp$ — —.

For (pr. I.8) since — — = — — (const.), — — common to both, and — — = — — (def. 15),
 $\therefore$ ⤿ = ⤿, and
 $\therefore$ — — $\perp$ — — (def. 10).
