

Book I. Prop. XIII. Theor. *When a straight line (—) standing upon another straight line (—) makes angles with it; they are either two right angles or together equal to two right angles. If — be $\perp$ to — then,*

 and  =  (def. 10),

but if — be not $\perp$ to —, draw — $\perp$ — (pr. I.11);

 +  =  (const.),

 =  =  + 

$\therefore$  +  =  +  +  (ax. II)

=  +  = .
