

Book I. Prop. XXI. Theor. *If from any point () within a triangle*

(), straight lines be drawn to the extremities of one side (), these lines must be together less than the other two sides, but must contain a greater angle.

Produce ,

 +  >  (pr. I.20),

add  to each,

 +  >

 +  (ax. IV)

in the same manner it may be shown that

 +  >  + ,

$\therefore$  +  >

 + ,

which was to be proved.

Again  >  (pr. I.16),

and also  >  (pr. I.16),

$\therefore$  > .
