

Book I. Prop. XL. Theor. *Equal triangles (▲ and ▲) on equal bases, and on the same side, are between the same parallels. If ——— which joins the ver-*

tices of triangles be not || ———, draw ——— || ——— (pr. I.31), meeting

Draw ———.

∴ ——— || ——— (const.)

▲ = ▲ (pr. I.38)

but ▲ = ▲ (hyp.)

∴ ▲ = ▲,

a part equal to the whole, which is absurd.

∴ ——— ∦ ———: and in the same manner it can be demonstrated that no other line except ——— is || ———:

∴ ——— || ———.
